

Placement Lab - Version 3

Document-ID: PLACEMENT-LAB-V3

Section 0 - Preamble inserted in version three

This preamble shifts the whole document once more, so anything that was placed - including re-attached annotations - moves again.

Section 1 - Introduction

This document exercises the annotation re-anchoring pipeline (ADR-0009). Annotate the three target sentences on version one, then upload the next version and watch the placement chips.

Section 2 - Stable context

This paragraph is identical in every version and should always re-anchor exactly where it was.

Section 2b - Inserted in version two

This freshly inserted section pushes everything below it further down the page, so the alpha target changes its position.

Section 3 - Target ALPHA

The alpha target sentence keeps its exact wording in every version but will not keep its position.

Section 4 - Rewritten

Everything here was rewritten from scratch; nothing resembles the old content of this section.

Section 5 - Rewritten

A completely different closing thought stands here now.

Section 6 - Closing

Pick any sentence here as a re-attach target.
